# Summary of entries in the Soil Incubation Database

Carlos A. Sierra and Heidi Völkel

24 August, 2016

This file contains a summary of the data currently available in the soil incubation database **sidb**. Currently, the number of entries in the database is 16. Most entries have multiple time-series of CO2 flux release from incubation experiments. The current total number of time-series is 187, and the total number of datapoints is 2359. The last entry was added on 2016-08-24.

Locations for which data are available are presented in the following map

Datasets

The file `~/scripts/plotEntry.R` can be used to plot individual entries from the database. For example
```r
source("~/sidb/scripts/plotEntry.R")
plotEntry(entry=Andrews2000SBB)
```

The plots produced by this function are at the moment not of high quality, so use the function only to visually assess the data. For exmaple,

```r
plotEntry(entry=Arevalo2012)
```

Arevalo2012

produces output that is not ideal for publication. You're welcome to modify the function `plotEntry` for output of better quality.
